Formula One Historic Race Strategy Viewer & Model

- Developed a WPF desktop app for analysing historical Formula One race data.
- Implemented a novel spatial interpolation model to simulate tyre degradation, fuel mass impact, and traffic effects on the outcome of a race.
- Enabled users to tweak race scenarios (e.g. pit stop timing, tyre choices) and visualise the impact on race outcomes in real time.
- Integrated data from an external API into the application.
- Ensured efficient performance while processing complex race scenarios.

o e e o So t ea a oo SEPTEMBER 2017 - JULY 2019 • A Level Mathematics (A*) • A Level Further Mathematics (A*) A Level Physics (A*) • AS Level Computer Science (A) Sgt ao 00 SEPTEMBER 2005 - JULY 2017 • 7A*s, 4A's • A* in Mathematics & English Language • A in Additional Mathematics • A in Statistics • Academic Scholarship - 2012 - 2017 **Projects** e o e e e SEPTEMBER 2020 — SEPTEMBER 2020 2 week work experience with Doddle. • Produced a Python Flask app to create a Slack bot, using Slack's Events API and Doddle's internal API's. t e a SEPTEMBER 2017 - JUNE 2018 Industry collaboration project with Arbor, a statistical company aimed at providing insights into educational data. • Worked in a team of 4 to produce a GUI implementation of a statistical tool used to group multi - academy schools into groupings, based off specific data about an

academy.
